

AminoShure®-XL

Precision Release Lysine

AminoShure®-XM

Precision Release Methionine

Save on Your Lysine and Methionine Investment

With the launch of the new AminoShure®-XL, you can now save on your entire amino acid investment. Ensure the cows are getting all the lysine and methionine you expect with the reliable and consistent portfolio of AminoShure®-XM and AminoShure-XL.

Take the **Real Results Challenge**

Now there's a simple way to see the results for yourself. Try AminoShure®-XL for 60 days and we're confident you'll be happy with the savings and the performance in your herd.

- 1 Sign up for the **Real Results Challenge** with your Balchem representative.
- 2 Include AminoShure-XL *Precision Release Lysine* as your lysine source and receive a \$0.50/lb rebate on product fed during the 60-day trial period.
- 3 Double your savings by including AminoShure-XM* to meet your methionine needs. Even if you're already feeding AminoShure-XM, you'll get an additional \$0.50/lb rebate after the 60-day feeding period.
- 4 Monitor milk production and components across your herd. Report the results using the **Real Results Challenge** rebate form (supplied by your Balchem Representative).
- 5 Receive your AminoShure-XL and AminoShure-XM rebate of \$0.50/lb of each product fed after the 60-day feeding period.

Continue to include the powerful combination of AminoShure-XL and AminoShure-XM in your daily ration and see the benefits of cost savings and production responses.

Precision Release Lysine

AminoShure®-XM
Precision Release Methionine

The Difference is

Balchem's new X-technology provides the optimal combination of cost, feed stability, rumen stability and intestinal release to deliver the best cost per unit of available methionine and lysine on the market today. Numerous research studies at multiple universities were completed to accurately characterize and validate the attributes so you can be confident when choosing AminoShure-XL and AminoShure-XM.

- **Cost** – The new X-technology has improved the nutrient bioavailability which, in effect, lowers the encapsulation costs per unit of metabolizable methionine and lysine.
- **Feed Stability** – The new X-technology employs a true lipid-based system that is more durable than polymer and ethylcellulose coatings.
- **Rumen Stability** – The X-technology has been masterfully designed to resist ruminal degradation, maximizing the nutrient payload delivered to the small intestine.
- **Intestinal Release** – The X-technology effectively delivers methionine and lysine into the small intestine where it is absorbed and utilized by the cow to maximize productivity.
