

# Balchem Participates in Keurig's K-Cycle Program

## Reducing Waste with Keurig's K-Cycle® Program

In line with our commitment to sustainability, Balchem participates in Keurig's K-Cycle® program, a recycling initiative focused on reducing waste from K-Cup® beverage pods. Through this program, used K-Cup® components—including coffee grounds, plastic, and aluminum—are diverted from landfills and responsibly recycled or composted.

Our employees contribute to K-Cycle® by disposing of used K-Cups in designated bins, after which they are sent to Keurig's specialized facilities. The K-Cup® pod components are then separated and turned into compost and recycled productions — creating goods with a useful second life.

For more information on this program, please see Keurig's [K-Cycle](#) webpage.
