

**FOR IMMEDIATE RELEASE**

**Balchem Corporation Announces Global Price Increase for  
Animal Nutrition & Health Products**

Montvale, New Jersey, May 1, 2026. **Balchem Corporation** (NASDAQ: BCPC) announced that it had implemented a global price increase across its Animal Nutrition and Health (“ANH”) product portfolio, including Choline Chloride, micro-encapsulated amino acids, and other specialty nutrition products.

The price increase went into effect on April 15, 2026, or as permitted under our existing contractual agreements.

Ongoing geopolitical conflicts in the Middle East have driven widespread volatility across global markets, resulting in increased energy prices, higher costs for certain raw materials and chemical inputs, increased freight costs, and volatility in global shipping patterns. These conditions have impacted production economics and supply chain costs across the animal nutrition industry.

Balchem remains committed to providing high-quality, reliable nutrition solutions and maintaining supply continuity during this period of market disruption. Customers are encouraged to contact their Balchem sales representative for additional information.

**About Balchem Corporation**

Balchem Corporation develops, manufactures and markets specialty ingredients that improve and enhance the health and well-being of life on the planet, providing state-of-the-art solutions and the finest quality products for a range of industries worldwide. The company reports three business segments: Human Nutrition & Health; Animal Nutrition & Health; and Specialty Products. The Human Nutrition & Health segment delivers customized food and beverage ingredient systems, as well as key nutrients into a variety of applications across the food, supplement and pharmaceutical industries. The Animal Nutrition & Health segment manufactures and supplies products to numerous animal health markets. Through Specialty Products, Balchem provides specialty-packaged chemicals for use in healthcare and other industries, and also provides chelated minerals to the micronutrient agricultural market.
